

This is where I selected the device that auto-populated when I went to add a reserved IP address.

<input checked="" type="radio"/>	8	192.168.1.100	Server	D8:CB:8A:DF:8D:D4
----------------------------------	---	---------------	--------	-------------------

When I selected the above line, this populated the form at the bottom of the screen.

IP Address	<input type="text" value="192"/> . <input type="text" value="168"/> . <input type="text" value="1"/> . <input type="text" value="100"/>
MAC Address	<input type="text" value="D8:CB:8A:DF:8D:D4"/>
Device Name	<input type="text" value="Server"/>

When clicking +Add, I received this error.

Failure

Invalid MAC address. D8CB8ADF8DD4

This screen will automatically return to the previous screen in a few seconds...
