

Current Network Setup

In this configuration nothing will connect to either the WD or Synology media servers if going through the EAX20. Not even the Sony Blu-Ray player which is directly wired.

All media servers can also be accessed if going wirelessly through the Arris Wifi Router or EX7000.

Modified Network Setup

In this configuration nothing will connect to either the WD or Synology media servers if going through the EAX20. However, the Sony Blu-Ray player which is now directly wired to a switch and bypassing the EAX20 works just fine.

All media servers can also be accessed if going wirelessly through the Arris Wifi Router or EX7000.
