

Update your satellite

Check to see if your firmware versions are the same for your Router and your Satellite(s). Do this from routerlogin.net

The user name is admin and the password is what you set up when you set up the account or it's on the bottom of your router.

Router Update

Online Update Manual Update

Check for new version from the Internet.

Check

Status:

	Model Name	Device Name	Current Firmware Version	Status
Router	MR60	MR60	V1.0.6.110	No new firmware available
Satellite	MS60	Satellite-1	V1.0.6.110	No new firmware available
Satellite	MS60	Satellite-1	V1.0.6.110	No new firmware available

Upload

If any of them are not the same, you will need to manually update the satellites individually.

Go to [netgear.com/support/product](https://www.netgear.com/support/product) and type in MS60 (since you are looking for the satellite firmware).
Download the version you need. Probably 1.0.6.110

<https://www.netgear.com/support/product/ms60.aspx#download>

Open a second browser and type in the IP address of your satellite. For the satellite in this screenshot I would use <http://192.168.1.3>

You will be prompted to use your routerlogin.net password.

Satellite Update

Locate and select the upgrade file on your hard disk.

MS60-V1.0.6.110_2.0.49.chk

The satellite will reboot and you will be able to see the updated firmware version from the status.
