To whom it may concern:

I have once again been sent an off putting email, per the first attachment. I have also tried to reach a human being at Google at each of the phone numbers listed in the second attachment. The numbers either do not answer, they disconnect, or are incorrect. This is disgusting.

Equally disgusting is my attempt to call someone at Netgear. I called the following number: (408)890-3088. I have been transferred three times and I have now been on hold for an hour.

Will you folks please help me? Make me feel like you value me as a customer.

Sincerely,
Alex Gerwer

Paul,

I am in receipt of your email, per the attached. No one is asking any questions and there are no screenshots. Also, it seems that every email comes from a different person. Wuld it be possible to at least have one individual "own" this inquiry rather than a bunch of people writing emails with impertinent comments?

Sincerely,
Alex Gerwer

Portia,

I appear to be spinning my wheels. The answer to my request regarding setting up the ORBI WiFi router to work with VPN by Google One should be straightforward. The emails that I have received thus far, such as the one attached here, seem to be avoiding answering my question. Please help in a meaningful way.

Sincerely,
Alex Gerwer

Vince,

It seems that your support simply consists of asking irrelevant questions, per the attached.

I will make my request another way. Could you please provide detailed directions for setting up a WiFi router as a client to VPN by GoogleOne as a VPN server. It would be ideal to get such directions that specifically refer to using an Orbi router as the VPN client in the above inquiry. My sense is that there are some configuration settings which specifically connect the Orbi router VPN as a client to the VPN by GoogleOne server similar to how a computer with your app acts as a server to your VPN by GoogleOne server. I believe that the Orbi router runs Lynx of some sort as an operating system, but the silent Netgear folks on this email could perhaps break their silence to participate in this.

Sincerely,
Alex Gerwer

To whom it may concern:

I am in receipt of your most recent email, per the attached. It seems that I am not being understood.

I need to be able to use my Google One VPN with my Orbi router as the VPN client.

I have copied folks from Netgear to help with this.

Based upon what I know and what you have written, **it seems that what I need to be able to provide the Netgear folks is the settings for the custom VPN client that allows connection with the Google One VPN server.** Could you please provide those? Candidly, your last email attached (was meaningless). Thank you very much.

Sincerely,
Alex Gerwer

Asuka,

I am in receipt of your email, per the attached. As it turns out, I believe that the Orbi router has a Custom VPN connection (which is mostly done by advanced users or VPNs that do not configure your connection automatically):

<https://www.google.com/url?sa=t&rct=j&q=&esrc=s&source=web&cd=&cad=rja&uact=8&ved=2ahUKEwiZ-bfrgNmDAXV3llkEHSzyASgQFnoECCKQAQ&url=https%3A%2F%2Fwww.vpntracker.com%2Fus%2Fvpndevice%2F405%2FNETGEAR-Orbi-Pro-Business-WiFi-System-SRK60.html&usg=AOvVaw3fhQoFkavwCQBafZg-Dr2p&opi=89978449>

What I need is the settings for the custom VPN client that allows connection with the Google One VPN server. Could you please provide those? Thank you very much.

Sincerely,
Alex Gerwer

Alfie,

I am now trying to use the Beryl AX in the repeater mode, as an Open VPN client to a Netgear Orbi server. The first attachment is the VPN configuration file for the Beryl AX to function as an Open VPN client with the Netgear Orbi Open VPN server. This file works when I use the Windows 11 Open VPN client directly from my computer. The second attachment contains the System, Kernel, and VPN log files. The Beryl AX works properly as a repeater without the VPN. Please help. Your prompt attention is much needed and greatly appreciated.

Hi Asg_akn,

As I have said, Netgear expose minimum configuration so we cannot solve.
We never say it is compatible with Netgear vpn.

Alfie,

Thank you very much for your reply. It seems that the Orbi server is functioning properly, so it seems that the issue is using the config file setting that will properly work with your product. If you and your colleagues cannot determine those settings from what I have sent, I do not know who can. Seems like we need to return your product and move on to the next.

Hi Asg_akn,

I'd like to help. But I don't think I can work it out.

You may need to ask Netgear to get more options for the openvpn.

As I said, putting two support team in the email will not get more help, but it is confusing.

Alfie Zhao
